

Cilp Cas9-CKO Strategy

Designer: Yanhua Shen

Reviewer: Jia Yu

Design Date: 2021-11-22

Project Overview

Project Name

Cilp

Project type

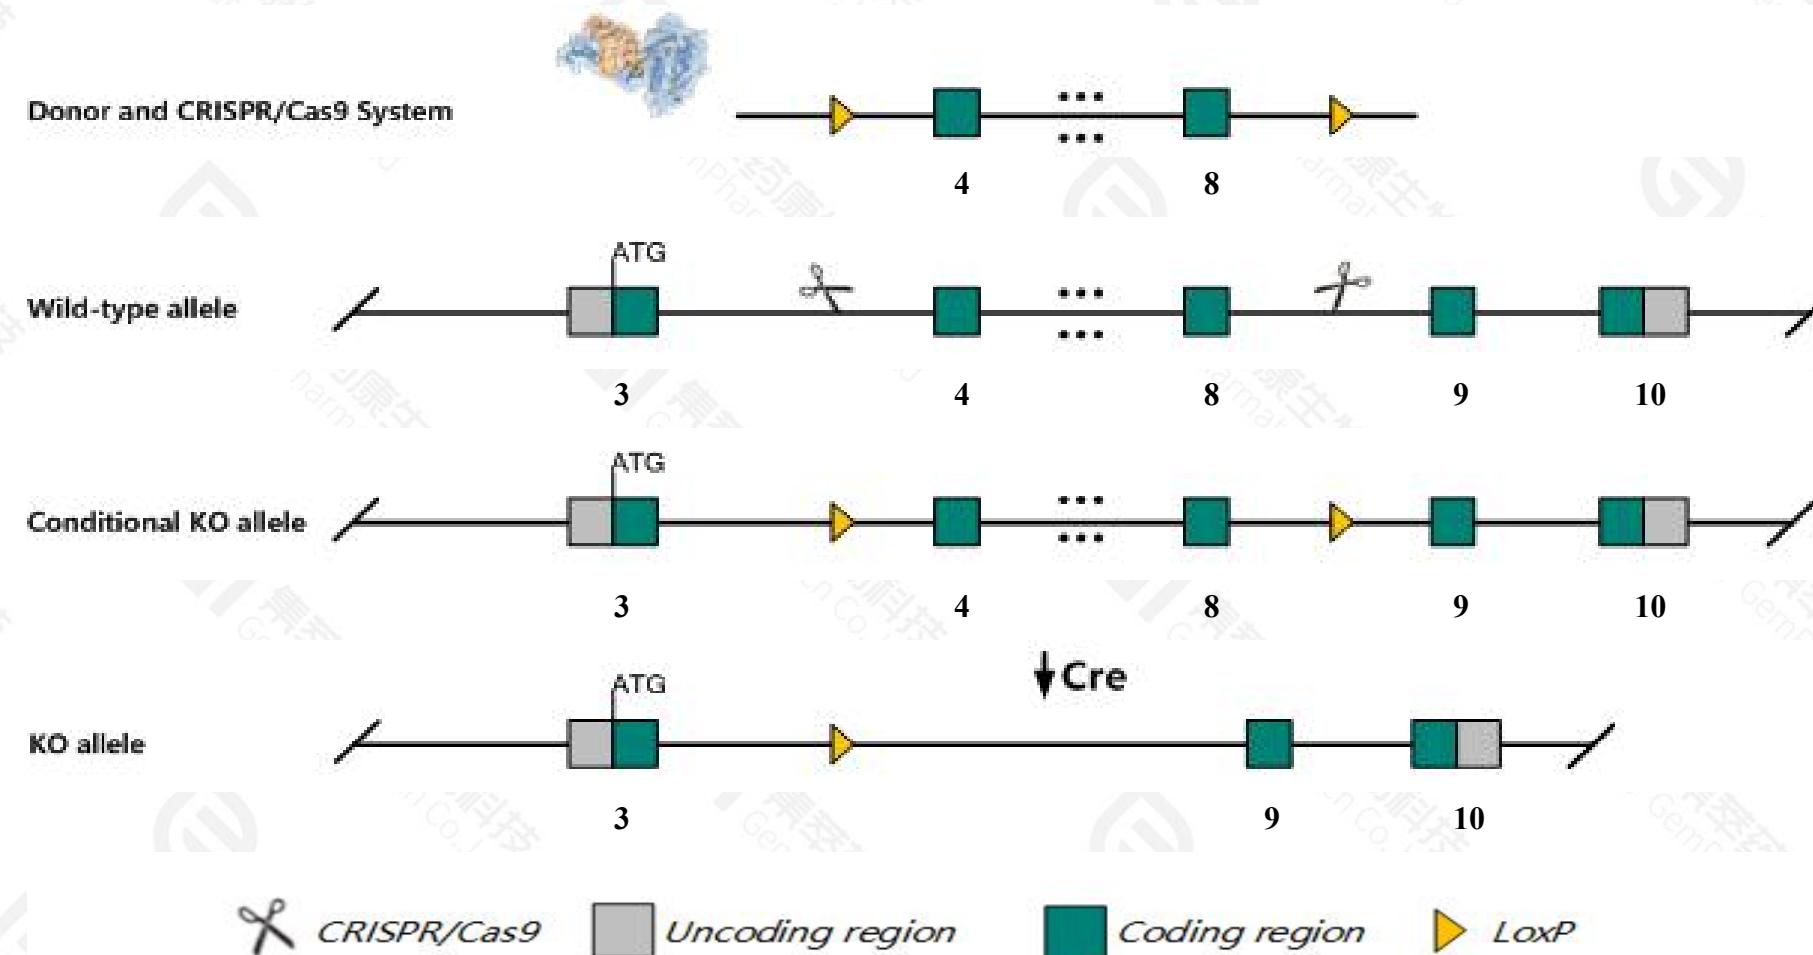

Cas9-CKO

Strain background

C57BL/6JGpt

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Cilp* gene. The schematic diagram is as follows:

Technical routes

- The *Cilp* gene has 2 transcripts. According to the structure of *Cilp* gene, exon4-exon8 of *Cilp-201*(ENSMUST00000048762.8) transcript is recommended as the knockout region. The region contains 967bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Cilp* gene. The brief process is as follows: CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- The *Cilp* gene is located on the Chr9. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Cilp cartilage intermediate layer protein, nucleotide pyrophosphohydrolase [Mus musculus (house mouse)]

Gene ID: 214425, updated on 25-Sep-2020

Summary

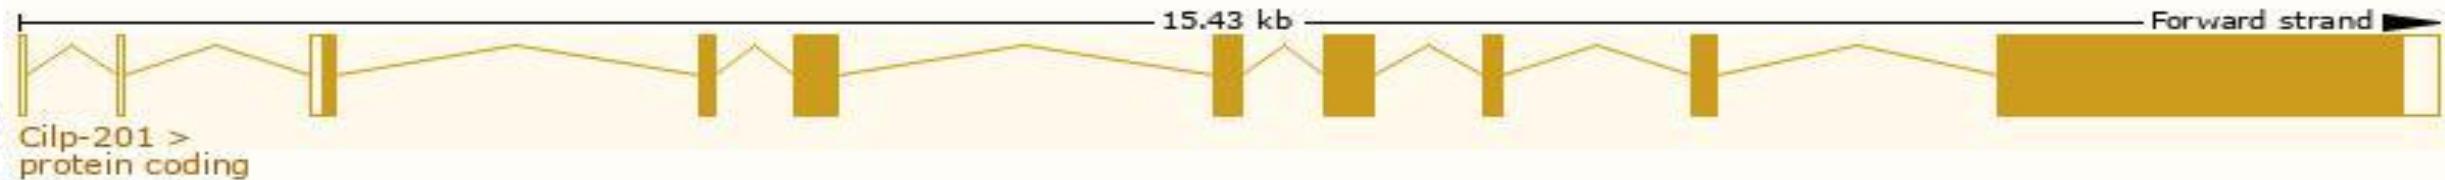

Official Symbol	Cilp provided by MGI
Official Full Name	cartilage intermediate layer protein, nucleotide pyrophosphohydrolase provided by MGI
Primary source	MGI:MGI:2444507
See related	Ensembl:ENSMUSG00000042254
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	9830114D16, C130036G17Rik, CLIP-1
Expression	Broad expression in genital fat pad adult (RPKM 10.5), subcutaneous fat pad adult (RPKM 8.2) and 16 other tissues See more
Orthologs	human all

Transcript information (Ensembl)

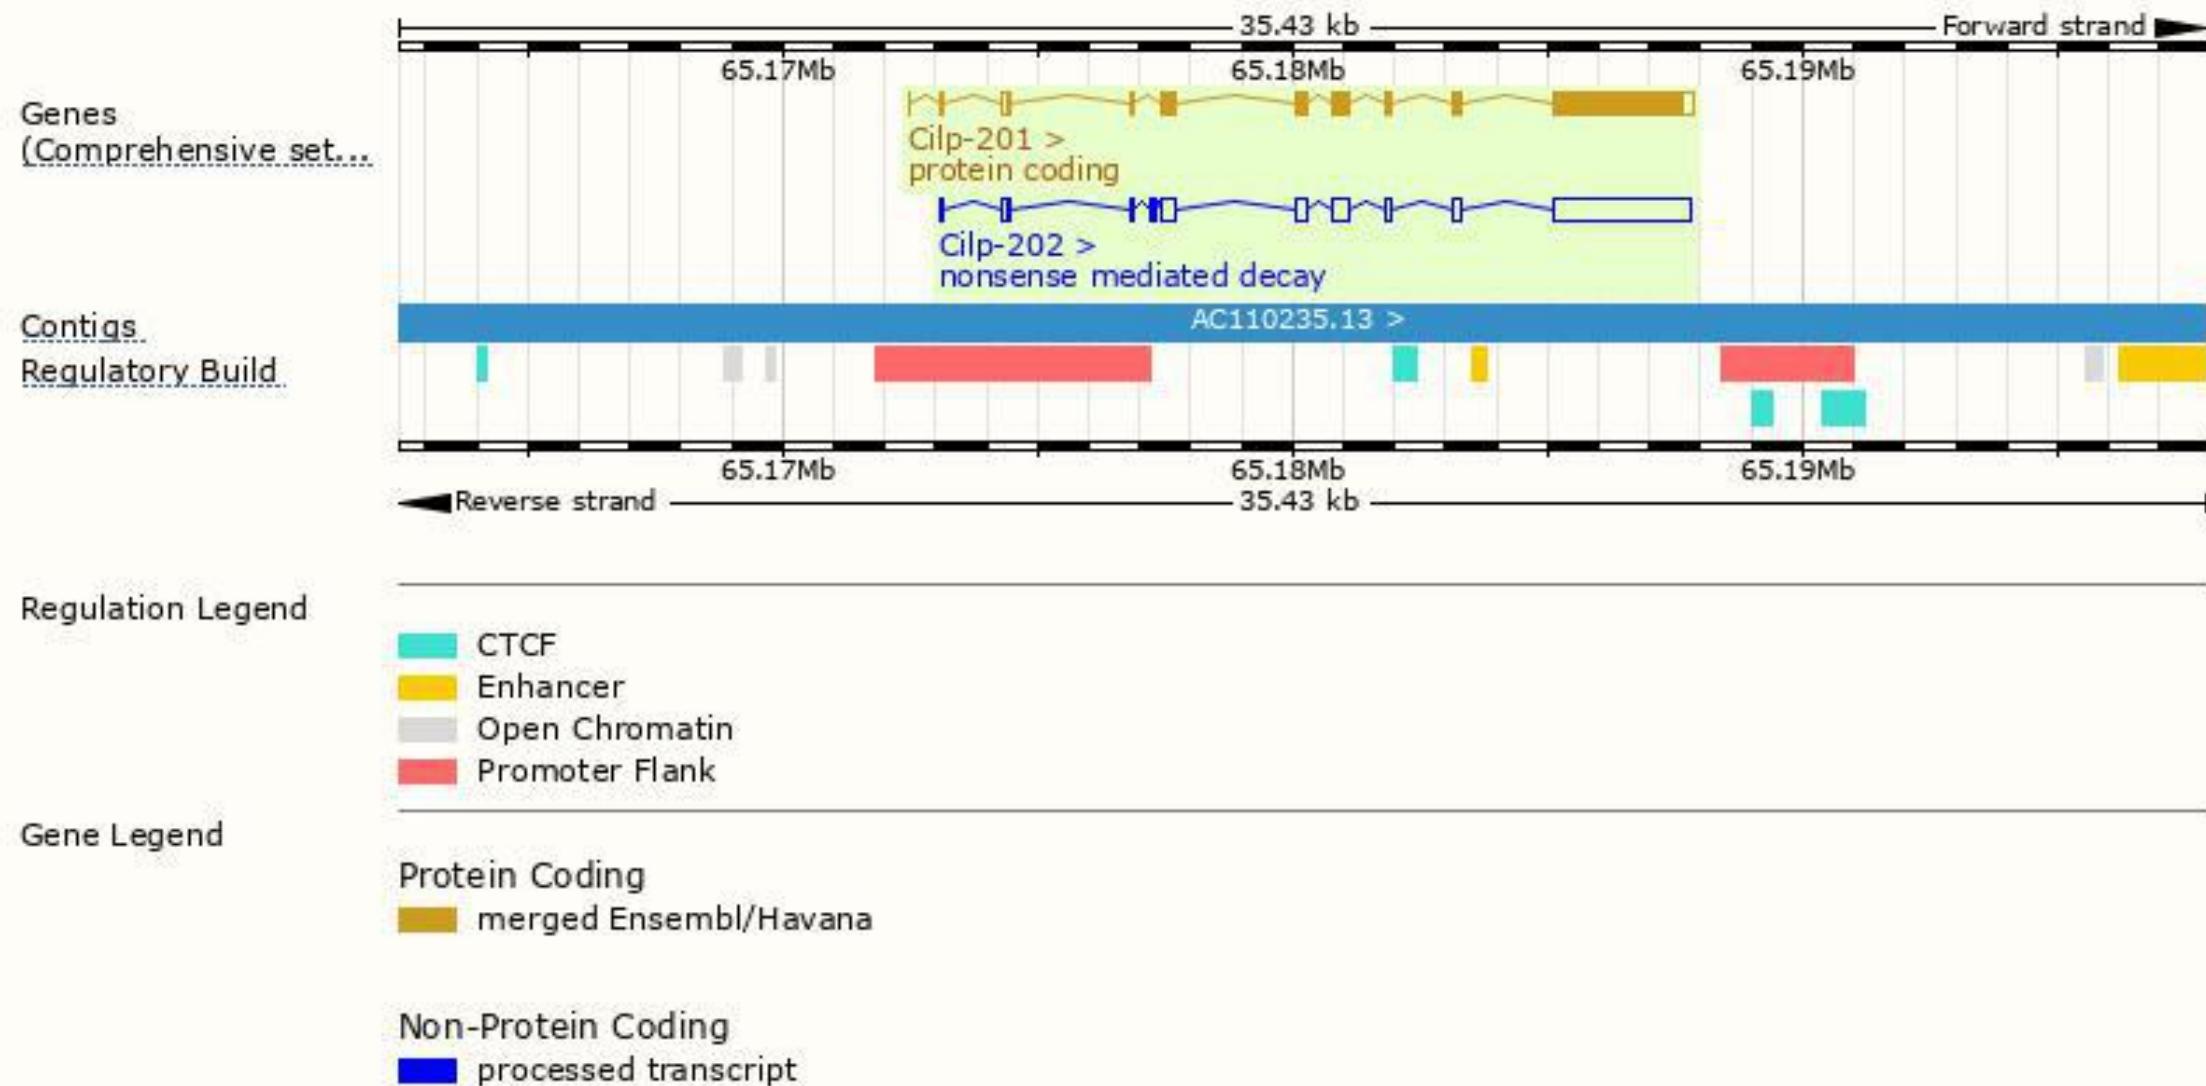

The gene has 2 transcripts, all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Cilp-201	ENSMUST00000048762.8	4153	1250aa	Protein coding	CCDS23287		TSL:1 , GENCODE basic , APPRIS P1 ,
Cilp-202	ENSMUST00000141382.2	4128	74aa	Nonsense mediated decay	-		TSL:5 ,

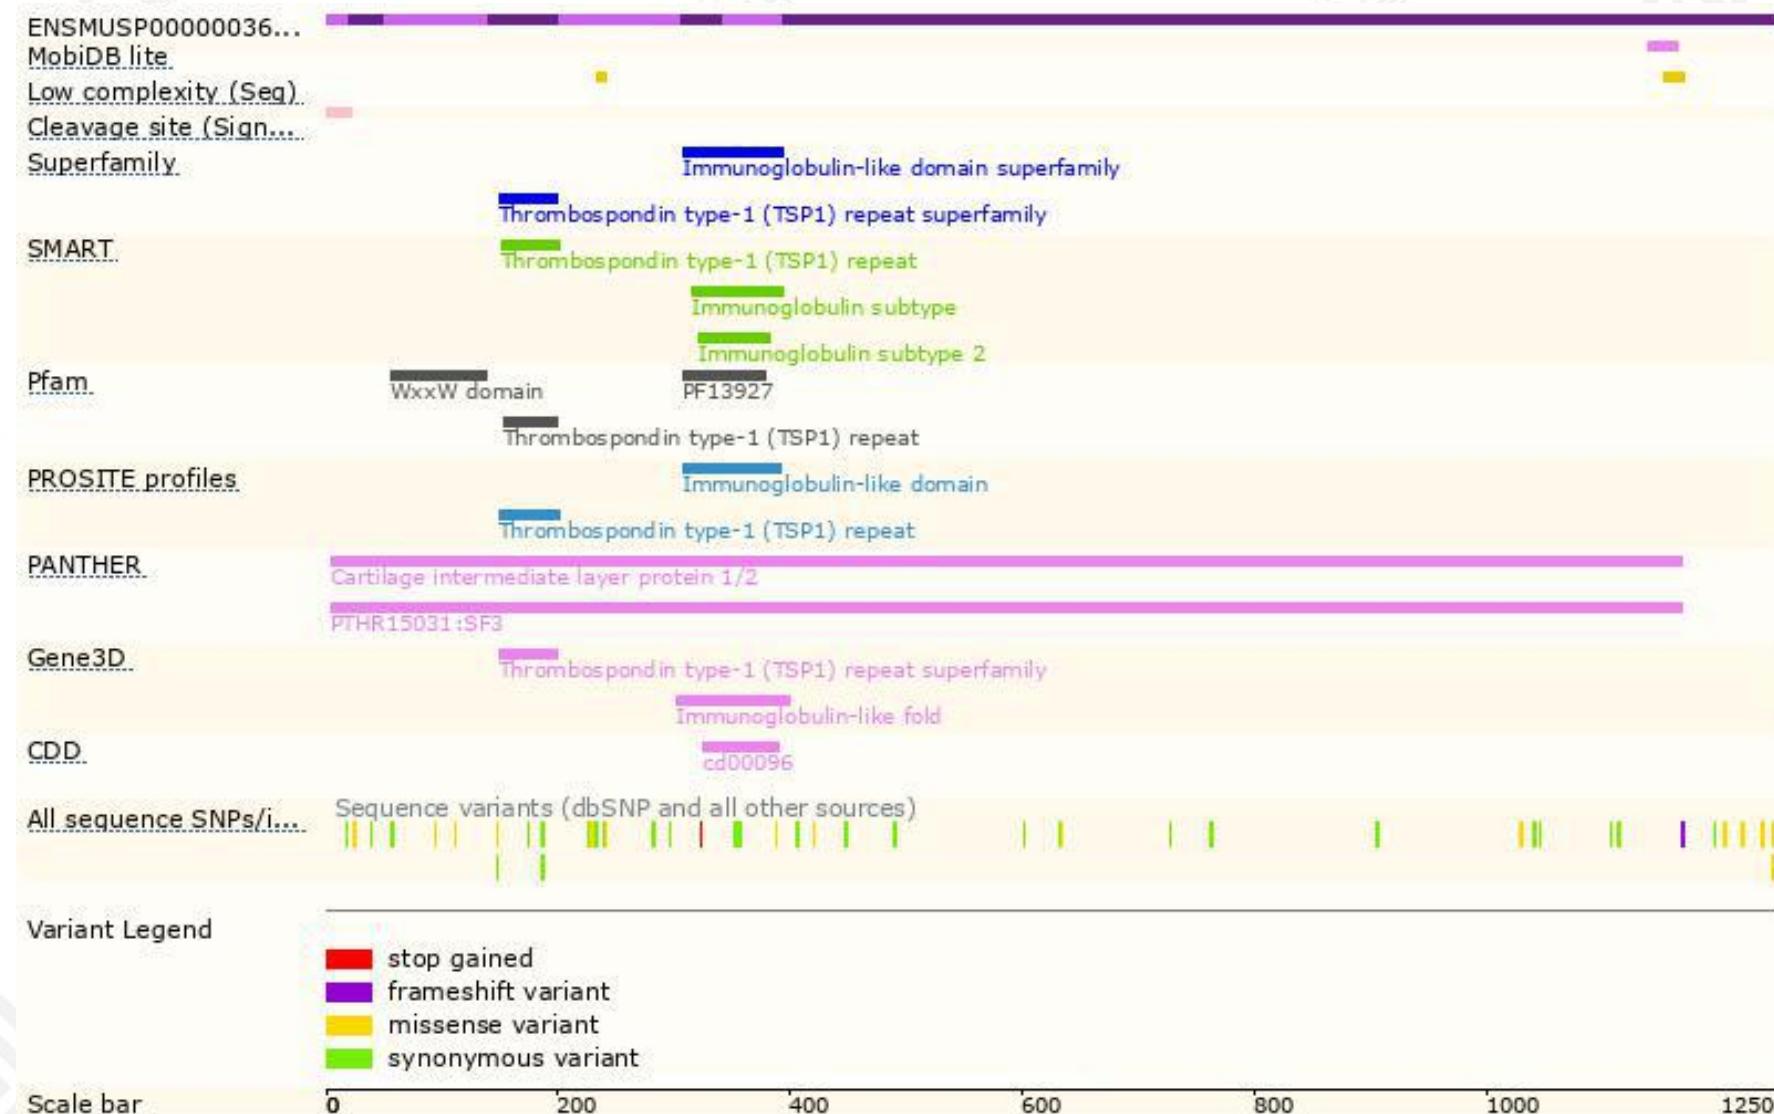

The strategy is based on the design of *Cilp-201* transcript, the transcription is shown below:

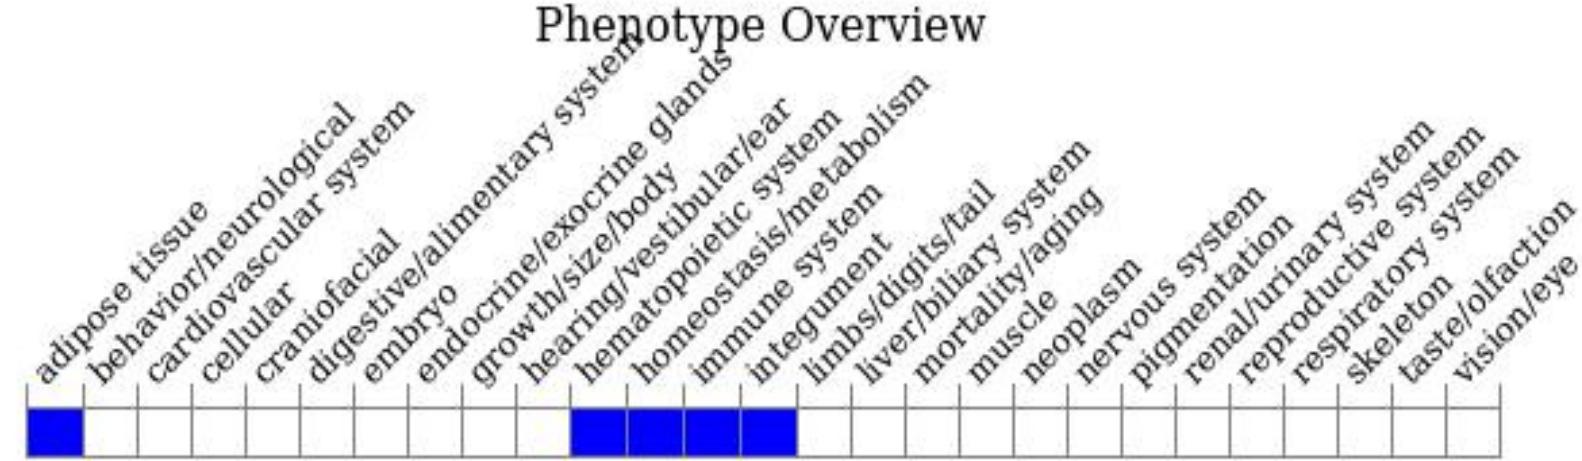

Genomic location distribution

Protein domain

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).
