Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Hpgd* gene. The schematic diagram is as follows:

Technical routes

> The *Hpgd* gene has 1 transcript. According to the structure of *Hpgd* gene, exon3 of *Hpgd-201*(ENSMUST00000034026.10) transcript is recommended as the knockout region. The region contains 107bp coding sequence. Knock out the region will result in disruption of protein function.

> In this project we use CRISPR/Cas9 technology to modify *Hpgd* gene. The brief process is as follows: CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice.Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

> The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

> According to the existing MGI data, homozygous mutation of this gene results failure of the ductus arteriosus to close and perinatal lethality. Mutant animals die within 12-48 hours after birth due to congestive heart failure. Mice homozygous for a hypomorphic allele exhibit preterm labor.

> The *Hpgd* gene is located on the Chr8. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.

> This strategy is designed based on genetic information in existing databases.Due to the complexity of biological processes,all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Hpgd hydroxyprostaglandin dehydrogenase 15 (NAD) [Mus musculus (house mouse)]

Gene ID: 15446, updated on 13-Mar-2020

- Summary

Official Symbol	Hpgd provided by MGI
Official Full Name	hydroxyprostaglandin dehydrogenase 15 (NAD) provided by <u>MGI</u>
Primary source	MGI:MGI:108085
See related	Ensembl:ENSMUSG00000031613
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha;
	Muroidea; Muridae; Murinae; Mus; Mus
Also known as	15-PGDH, AV026552
Expression	Broad expression in lung adult (RPKM 76.0), bladder adult (RPKM 50.8) and 17 other tissues See more
Orthologs	human all

☆ ?

Transcript information (Ensembl)

The gene has 1 transcript, and the transcript is shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Hpgd-201	ENSMUST0000034026.9	1683	<u>269aa</u>	Protein coding	CCDS40341	Q8VCC1	TSL:1 GENCODE basic APPRIS is a system to annotate alternatively spliced transcripts based on a range of computational methods to identify the most functionally important transcript(s) of a gene. APPRIS P1

The strategy is based on the design of *Hpgd-201* transcript, the transcription is shown below:

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(http://www.informatics.jax.org/).

According to the existing MGI data, homozygous mutation of this gene results failure of the ductus arteriosus to close and perinatal lethality. Mutant animals die within 12-48 hours after birth due to congestive heart failure. Mice homozygous for a hypomorphic allele exhibit preterm labor.
