Srrm2 Cas9-CKO Strategy

Designer: Yao Yu

Reviewer: Yanhua Shen

Design Date: 2022-09-23

Overview

Target Gene Name

- *Srrm2*

Project Type

- Cas9-CKO

Genetic Background

- C57BL/6JGpt
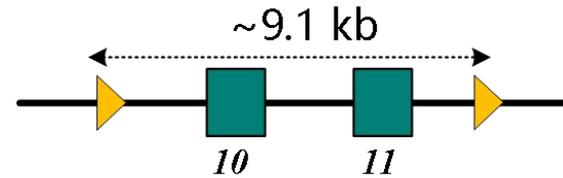

GemPharmatech™

Strain Strategy
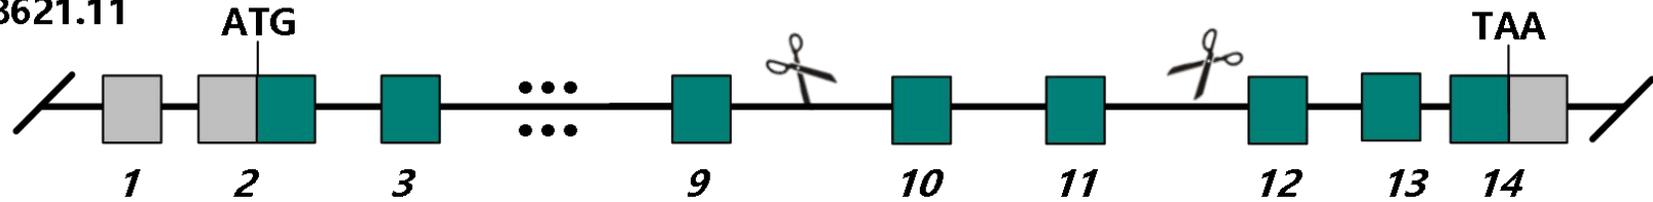

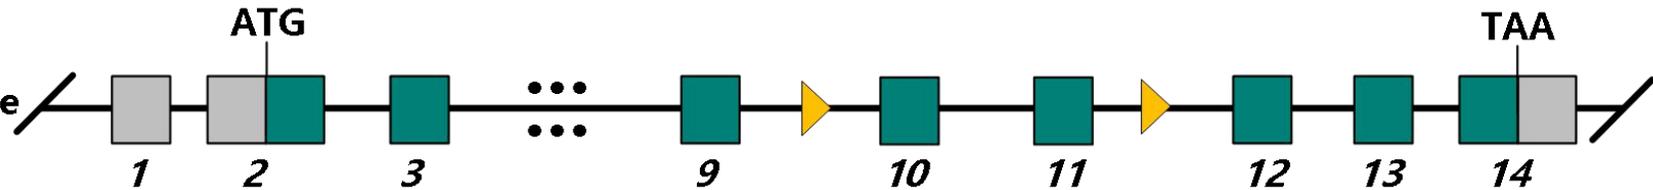

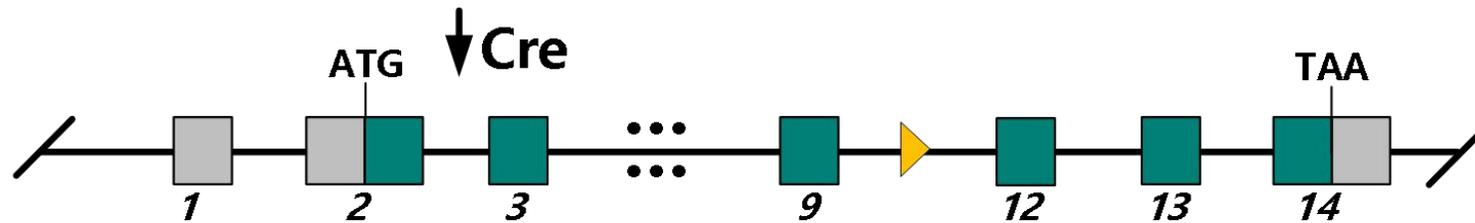

Schematic representation of CRISPR-Cas9 engineering used to edit the *Srrm2* gene.

Technical Information

- The *Srrm2* gene has 12 transcripts. According to the structure of *Srrm2* gene, exon 10-11 of *Srrm2*-201 (ENSMUST00000088621.11) transcript is recommended as the knockout region. The region contains 6857 bp of coding sequences. Knocking out the region will result in disruption of protein function.

- In this project we use CRISPR-Cas9 technology to modify *Srrm2* gene. The brief process is as follows: CRISPR-Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and on-target amplicon sequencing. A stable F1-generation mouse strain was obtained by mating positive F0-generation mice with C57BL/6JGpt mice and confirmation of the desired mutant allele was carried out by PCR and on-target amplicon sequencing.

- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Gene Information

Srrm2 serine/arginine repetitive matrix 2 [*Mus musculus* (house mouse)]

⬇ **Download Datasets**

Gene ID: 75956, updated on 30-Aug-2022

▲ Summary

Official Symbol	Srrm2 provided by MGI
Official Full Name	serine/arginine repetitive matrix 2 provided by MGI
Primary source	MGI:MGI:1923206
See related	Ensembl:ENSMUSG00000039218 AllianceGenome:MGI:1923206
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	SRm300; mKIAA0324; 5033413A03Rik
Summary	Predicted to enable C2H2 zinc finger domain binding activity; mRNA binding activity; and protein N-terminus binding activity. Predicted to be involved in mRNA splicing, via spliceosome. Predicted to act upstream of or within RNA splicing and mRNA processing. Predicted to be located in Cajal body and nuclear speck. Predicted to be part of U2-type catalytic step 2 spliceosome and U2-type precatalytic spliceosome. Orthologous to human SRRM2 (serine/arginine repetitive matrix 2). [provided by Alliance of Genome Resources, Apr 2022]
Expression	Ubiquitous expression in adrenal adult (RPKM 122.5), ovary adult (RPKM 102.7) and 28 other tissues See more
Orthologs	human all

Mouse Phenotype Information (MGI)

Source: http://www.informatics.jax.org/marker/MGI:1923206
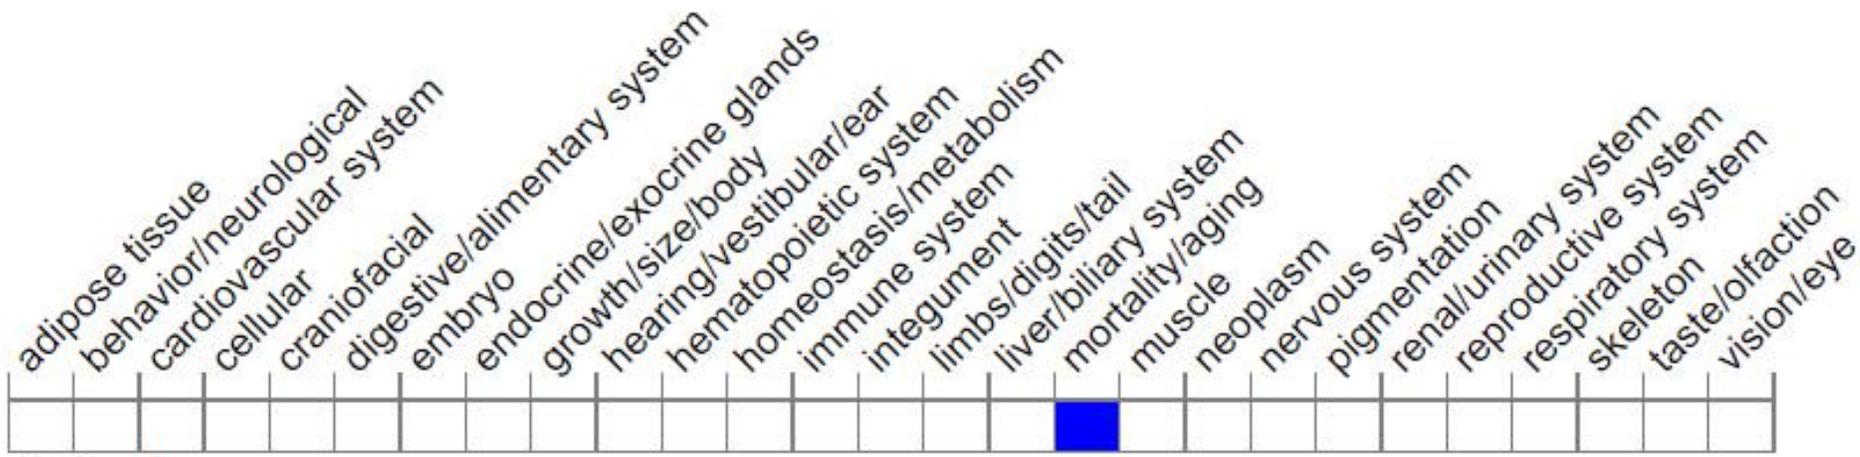

Important Information

- According to the available information (MGI), there is a certain lethality rate in pure-sibling mice with the knockout gene before weaning. http://www.informatics.jax.org/diseasePortal/popup?isPhenotype=true&markerID=MGI:1923206&header =mortality/aging

- The sequences encoding transcripts *Srrm2*-203, *Srrm2*-204, *Srrm2*-206, *Srrm2*-211, and *Srrm2*-212 are incomplete and the effect of this strategy on them is unknown.

- The knockdown region designed in this strategy is about 1.9 kp away from the 3' end of the *Elob* gene, and knockdown of the target gene may affect the regulation of the 3' end of the *Elob* gene.

- The effect of this strategy on the uncoded transcript *Gm49911*-201、 *Mir5125*-201 is unknown.

- *Srrm2* is located on Chr 17. If the knockout mice are crossed with other mouse strains to obtain double homozygous mutant offspring, please avoid the situation that the second gene is on the same chromosome.

- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.
