Genotyping Report

Strain ID	T020113	Strain Type	CKO(Cas9)	Genetic Background	C57BL/6JGpt
Designer	Ya'nan Xu	Gene Name	3/2	Arhgap32	S

1. Strategy of Genotyping

Wild type: ①PCR reaction obtains a single WT band; ②PCR reaction obtains a single WT band.

Heterozygote: ①PCR reaction obtains a WT band and a Targeted band; ②PCR reaction obtains a WT band and a Targeted band.

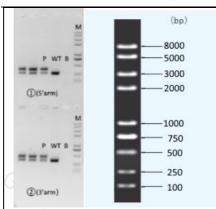

Homozygote: ①PCR reaction obtains a single Targeted band; ②PCR reaction obtains a single Targeted band.

Note: The sizes of WT and Targeted band are shown below.

2. Primer Information

PCR No.	Primer No.	Sequence	Band Size	
①(5'arm)	T020113-F1	TCTCTTCTGGGCTTCTGTCTCTTCTT	WT: 258bp	
	T020113-R1 AGACTGCAATCTTGGAGAGGAAGA		Targeted: 363bp	
②(3'arm)	T020113-F2 GTCCATCAGTGTAGTTTTCCAGAAAGTC		WT: 386bp	
	T020113-R2	TGATCAAGTAGCATCACATGCTTGG	Targeted: 492bp	

3. Gel Image & Conclusion

Note: P: Positive control; WT: Wildtype control; B: Blank control (ddH₂O); M: DNA Ladder

- ① Control (WT): It is an important reference mark for whether the PCR reaction is successful and whether the product band position and size meet the theoretical requirements.
- ② Control (B): PCR amplification was performed without template in the PCR reagent to monitor whether the reagent was contaminated.

4. PCR Condition
