Genotyping Report

| Strain ID | T058417 | Strain Type | KI(Cas9) | Genetic Background | C57BL/6JGpt |

| Designer | Tianjiao Wang | Gene Name | 3/2 | H11-CAG-LSL-tdTomato | 6 |

1. Strategy of Genotyping

Wild type: ①PCR reaction obtains none band; ②PCR reaction obtains a WT band.

Heterozygote: ①PCR reaction obtains a Targeted band; ②PCR reaction obtains a WT band.

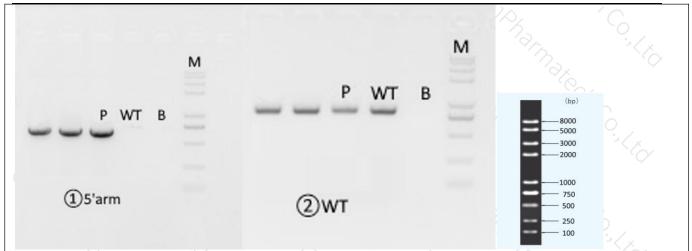

Homozygote: ①PCR reaction obtains a Targeted band; ②PCR reaction obtains none band.

Note: The sizes of WT and Targeted band are shown below. For ②PCR reaction, because the WT band is much smaller than the target band, it is likely to produce dominant amplification, the reaction is only used to judge whether there is a WT allele.

2. Primer Information

| PCR No. | Primer No. | Primer Name | Sequence | Band Size | |

3. Gel Image & Conclusion

Note: P:Heterozygous samples; WT: Wildtype control; B: Blank control (ddH2O); M: DNA Ladder

- ① Control (WT): It is an important reference mark for whether the PCR reaction is successful and whether the product band position and size meet the theoretical requirements.
- ② Control (B): PCR amplification was performed without template in the PCR reagent to monitor whether the reagent was contaminated.
